WALL FLUSH SKIRTING BOARDS

AND SHADOW GAP PROFILES

for design-lovers

AGS_{systems}

THE INNOVATIVE BUILDING TECHNIQUE FOR SUPERIOR STANDARDS

Functional fitting due to a unique plug system

The flush skirting meets simple, timeless elegance with comfort and modern well-being in your own home. Suitable for solid and dry construction.

Annoying dusting of the skirting board upper edge and thus also the resulting wiping marks on the walls belong to the past.

Since there is no direct contact between floor, skirting and brickwork, there will be no floor vibrations transmitted.

Quick and easy assembly trough the patented plug-system with corresponding corner and linear connectors. This eliminates the need for timeconsuming mitre cut.

The skirting profile is applied directly to the raw brickwork before the plasterwork. The top edge conduces as a guideline for the vertical and horizontal arbor. That simplifies the plasterwork and saves valuable time when setting the edges.

New standards in material selection:
from the classic wooden types up to aluminium and stainless steel, dirt-repellent surfaces, Corian, Carbon and many more.

Indirect lighting with LED stripes in the skirting boards allow new design of the possibilities in the lighting engineering.

Also possible to use the skirting boards for steps, landings, stairs and curves. Simple but perfect.

- cut the profiles to size
- attach corner pieces
- mounting adhesive on rear side spread over the entire surface
- align with height
- fix
- before laying the floor covering
- remove protective film
- insert skirting board
- thats it!

METAMOD, s.r.o.

functionality and design

METAMOD, s.r.o. is a Slovak company cooperating with AGS-systems. AGS-systems, an internationally operating Italian company, is a specialist in flush-to-the-wall system solutions and represents innovation, functionality and the realization of minimalist architecture.

CONNECTING ELEMENTS

for wall flush skirting boards

Perfect transitions of lines are essential for design lovers. The sophisticated system with its specially manufactured connecting elements offers the possibility to connect wall flush skirting boards directly to the door frames in order to realize a seamless transition.

PERFECT EDGES
for high-quality results

MODEL S22

aluminium shadow gap profile

product-features

- for masonry and drywall including protection foil
- profile length: 2,000 mm
- profile height: 24+25 mm
- profile depth: 15 or 13.2 mm drywall
- recess: 9.7 mm
- max. shadow gap height: 22 mm

model

MODEL S20

aluminium shadow gap profile
black anodized

product-features

- for masonry and drywall including protection foil
- black anodized
- profile length: 2,000 mm
- profile height: 22+15 mm
- profile depth: 14 or 13.5 mm drywall
- recess: 11 mm
- max. shadow gap height: 20 mm

MODEL ILLU A

aluminum ceiling shadow gap profile
suitable for LED strip installation

product-features

- for masonry and drywall including protection foil
- black anodized
- profile length: 2000 mm
- profile height: 55 mm
- profile depth: 42 mm
- recess: 17 mm
- shadow gap height: 30 mm
- shadow gap width: 17 mm

model

ILLU A
for masonry and drywall

diffusor for ILLU A/B
profile length: 2,000 mm

art. 10026

MODEL ILLU B

aluminum shadow gap profile
suitable for LED strip installation

product-features

- for masonry and drywall
- black anodized
- incl. protective foil
- profile length: 2000 mm
- profile height: 55 mm
- profile depth: 16.5 mm or 15 mm drywall
- recess: 15 mm
- max. shadow gap height: 25 mm

model

ILLU B
for masonry and drywall
